KRONOS Error “Java plug-in is not installed” -- Fix when using Internet Explorer

If you see this error message in IE when loading KRONOS:

Here is the fix:

**Step #1: Go to Tools and Select Compatibility View Settings:**

Download the Java plug-in from this server and install it manually.
Step #2: “wisc.edu” should be in the text field so click Add. If is not there you can type it in.

Step #3: Have the user log back-in-again and it should be good-to-go.
